

OFFICE OF INSPECTOR GENERAL

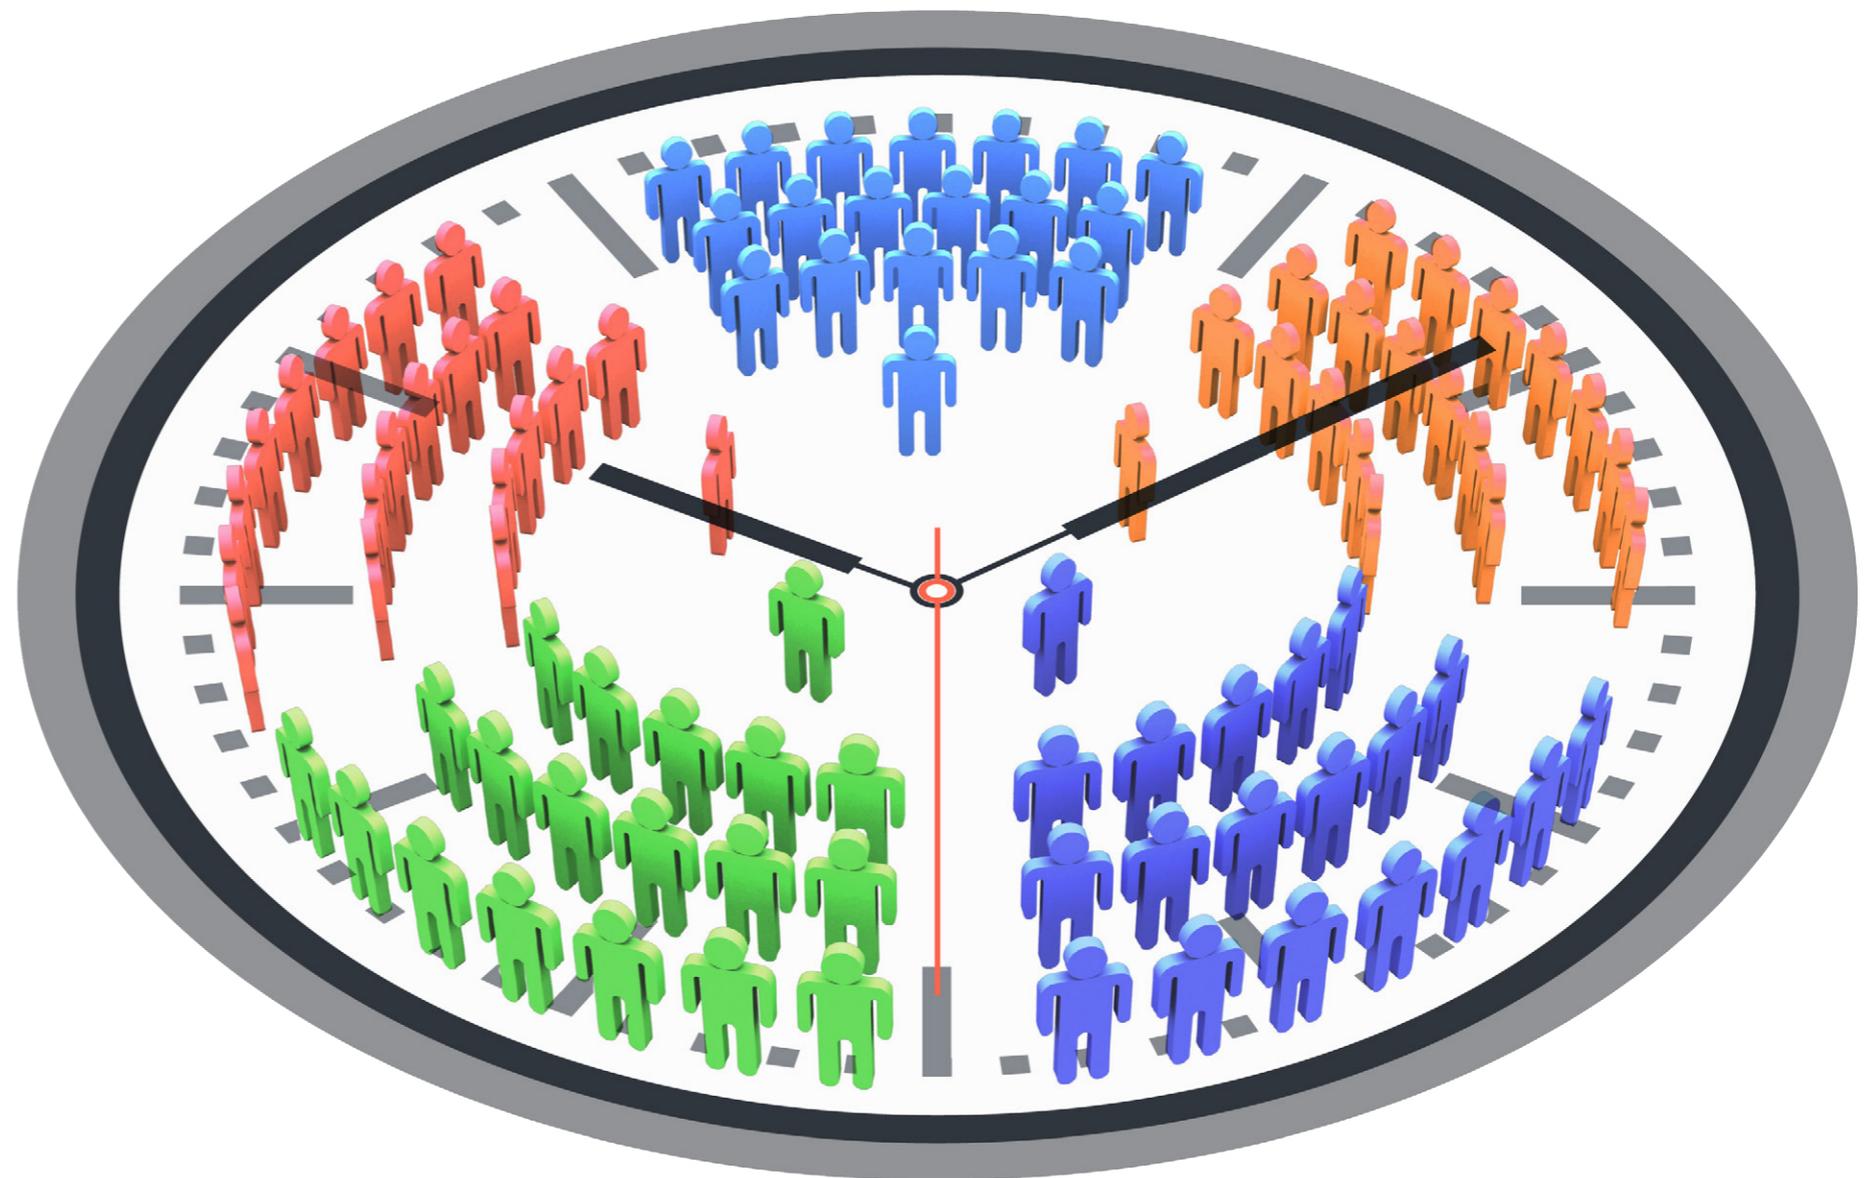

UNITED STATES POSTAL SERVICE

Supervisory Span of Control – Southern Area

Audit Report

Report Number
DR-AR-17-008

September 7, 2017

OFFICE OF INSPECTOR GENERAL

UNITED STATES POSTAL SERVICE

Highlights

In FY 2016, the Southern Area had 2,255 supervisors in post office operations, with 69,341 employees reporting to these supervisors.

Background

Supervising post office operations requires supervisors to possess the knowledge, skills and abilities to manage delivery (city and rural), retail, and customer service operations requirements as well as frequent interaction with the public.

The U.S. Postal Service uses the Supervisor Workload Credit (SWC) worksheet to determine the number of Executive & Administrative Schedule Customer Service Supervisors in post office operations. SWC worksheets are completed on a facility by facility basis, to calculate the span of control – the number of employees that report to each supervisor. Post Office Operations does not have a span of control target. However, a Postal Service Management Structure Study dated July 2003 determined the average span of control of 1:26 for postmasters was consistent with accepted best practice trends.

In fiscal year (FY) 2016, the Southern Area had 2,255 supervisors in post office operations, with 69,341 employees reporting to these supervisors, for an average span of control of 1:31 (one supervisor per 31 employees). The Southern Area had the highest number of supervisor vacancies and supervisors used 5,765,642 workhours and 805,108 overtime hours.

Our objective was to assess the span of control and use of supervisor workhours in post office operations in the Southern Area.

What the OIG Found

Our analysis of the 12 Southern Area districts showed the average span of control ratios ranged from a low of 1:27 to a high of 1:33, slightly higher than the accepted best practice average of 1:26. In addition, the span of control at 25 of the 34 individual post offices we reviewed exceeded best practices, ranging from 1:27 to 1:73. We found the high span of control at some units in the Southern Area impacted supervisors' workhours and their ability to effectively manage daily operational tasks.

Supervisory span of control challenges occurred in Southern Area facilities due to 292 vacant supervisor positions, and supervisors frequently detailed to higher level assignments or to other vacant supervisor positions. Span of control challenges along with the supervisor's daily workload also contributed to their ability to effectively manage daily duties and responsibilities at some units.

Consequently, supervisory workhours exceeded the area's FY 2016 plan by 303,670 hours and also contributed to the use of 805,108 hours of overtime by supervisors throughout the Southern Area. Additionally, facilities with the 292 vacancies accounted for 125,358 workhours over the plan and 238,743 hours of overtime. Filling vacancies and managing personnel assignments would improve the span of control ratio average and the supervisor's ability to effectively manage daily operational tasks and reduce supervisor workhours.

OFFICE OF INSPECTOR GENERAL

UNITED STATES POSTAL SERVICE

Southern Area management stated they had several strategies in place to address supervisor vacancies. In May 2017 area management implemented additional strategies to assist districts that included assigning every district an area human resource analyst and conducting weekly meetings with all district human resource managers to discuss each vacancy and actions taken to fill these vacancies. Therefore, we will not make a recommendation on this issue.

In other matters, we identified the SWC worksheet used to determine the authorized number of supervisors in post office operations does not give consideration to all of the supervisors' daily administrative responsibilities. The SWC's primary measurement is the number and type of employees supervised and does not include factors for supervisors' duties and responsibilities when managing these employees.

On March 18, 2017, the National Association of Postal Supervisors in conjunction with the Postal Service initiated a SWC work study at 34 pilot sites in six districts in the Northeast Area. The work study will include a review of supervisors' daily duties and responsibilities. Therefore, we will not make a recommendation on this issue.

What the OIG Recommended

We recommend management monitor the use of supervisors to detail assignments to lessen the impact to post office operations.

Findings

Our analysis of the 12 Southern Area districts showed the average span of control ratios ranged from a low of 1:27 to a high of 1:33, slightly higher than the accepted best practice average of 1:26, with 25 of the 34 individual post offices we reviewed ranging from 1:27 to 1:73.

Introduction

This report presents the results of our self-initiated audit of supervisory span of control in the Southern Area (Project Number 17RG010DR000). Our objective was to assess the span of control and use of supervisor workhours in post office operations in the Southern Area. See [Appendix A](#) for additional information about this audit.

Supervising post office operations requires each supervisor to possess the knowledge, skills and abilities to manage delivery (city and rural), retail, and customer service operations requirements as well as frequent interaction with the public.

The U.S. Postal Service uses the Supervisor Workload Credit (SWC) worksheet to determine the number of Executive & Administrative Schedule Customer Service Supervisors in post office operations. SWC worksheets are completed for every facility, to calculate the span of control – the number of employees that report to each supervisor (see [Appendix B](#)). Post Office Operations does not have a span of control target. However, a Postal Service Management Structure Study dated July 2003 determined the average span of control of 1:26 for postmasters was consistent with accepted best practice trends.

In fiscal year (FY) 2016, the Southern Area had 2,255 supervisors in post office operations, with 69,341 employees reporting to these supervisors, for an average span of 1:31 (one supervisor per 31 employees). The Southern Area had the highest number of supervisor vacancies and supervisors used 5,765,642 workhours and 805,108 overtime hours.

Summary

Our analysis of the 12 Southern Area districts showed the average span of control ratios ranged from a low of 1:27 to a high of 1:33, slightly higher than the accepted best practice average of 1:26, with 25 of the 34 individual post offices we reviewed ranging from 1:27 to 1:73. We found the high span of control at some units in the Southern Area impacted supervisor's workhours and their ability to effectively manage daily operational tasks.

Supervisory span of control challenges occurred in area facilities due to 292 vacant supervisor positions and supervisors frequently detailed to higher level assignments or to other vacant supervisor positions. Span of control challenges along with the supervisor's daily workload contributed to their ability to effectively manage daily duties and responsibilities at some units.

Consequently, as a result of these operational challenges, supervisory workhours exceeded the area's FY 2016 plan by 303,670 hours and also contributed to the use of 805,108 hours of overtime by supervisors. Additionally, facilities with the 292 vacancies accounted for 125,358 workhours over the plan and 238,743 hours of overtime. Filling vacancies, and managing personnel assignments would improve the span of control ratio average, and the supervisor's ability to effectively manage daily operational tasks and reduce supervisor workhours.

Southern Area management stated they had several strategies in place to address supervisor vacancies. In May 2017, area management implemented additional strategies to assist districts that included assigning every district an area human resource analyst and conducting weekly meetings with all district human resource managers to discuss each vacancy and actions taken to fill these vacancies. Therefore, we will not make a recommendation on this issue.

In other matters, we identified the SWC worksheet used to determine the authorized number of supervisors in post office operations does not give consideration to all of the supervisors' daily administrative responsibilities. The SWC's primary

Span of control challenges along with the supervisor’s daily workload to oversee delivery and customer service operations also contributed to their ability to effectively manage daily duties and responsibilities at some units.

measurement is the number and type of employees supervised and does not include other factors for supervisors’ duties and responsibilities when managing these employees.

On March 18, 2017, NAPS in conjunction with the Postal Service initiated a study of the tool used to determine the number of supervisors and workload at 34 pilot sites in six districts in the Northeast Area. The work study will include a review of supervisors’ daily duties and responsibilities. Therefore, we will not make a recommendation on this issue.

Span of Control

Our analysis of the 12 Southern Area districts showed the average span of control ratios ranged from a low of 1:27 to a high of 1:33, slightly higher than the accepted best practice average of 1:26 (see Table 1). In addition, our analysis showed 25 of 34 (74 percent) selected delivery units reviewed (see Appendix C) had a span of control that was higher than the best practice trend’s average, ranging from 1:27 to 1:73 (see Appendix D).

Table 1. FY 2016 Supervisor to Employee Ratio for Post Office Operations

District	Supervisors On Rolls	Employees On Rolls	Span of Control ¹
Alabama	153	4,510	29
Arkansas	92	2,778	30
Dallas	197	6,389	32
Fort Worth	138	4,160	30
Gulf Atlantic	219	6,711	31
Houston	241	7,955	33
Louisiana	155	4,567	29
Mississippi	85	2,678	32
Oklahoma	112	3,400	30
Rio Grande	237	7,662	32
South Florida	279	7,606	27
Suncoast	347	10,925	31
Total	2,255	69,341	31

Source: Enterprise Data Warehouse (EDW).

Span of control challenges along with the supervisor’s daily workload to oversee delivery and customer service operations also contributed to their ability to effectively manage daily duties and responsibilities at some units. Consequently, supervisory workhours exceeded the area’s FY 2016 plan by 303,670 hours and also contributed to the use of 805,108 hours of overtime by supervisors (see Table 2). Additionally, facilities with the 292 vacancies accounted for 125,358 workhours over the plan and 238,743 hours of overtime.

¹ The supervisor span of control was calculated by dividing the total number of employees by the total number of supervisors on the rolls.

Supervisory span of control challenges occurred in area facilities due to 292 vacant supervisor positions and supervisors frequently detailed to higher level assignments or to other vacant supervisor positions.

Table 2. FY 2016 Supervisor Workhour² Usage for Southern Area Districts

District	FY 2016 Planned Workhours	FY 2016 Actual Workhours	FY 2016 Variance Workhours	FY 2016 Overtime Used
Rio Grande	619,318	661,906	42,588	109,417
Suncoast	851,737	925,379	73,642	141,355
Houston	605,843	732,766	126,923	113,527
Dallas	514,228	529,587	15,359	54,549
South Florida	670,512	741,735	71,223	124,197
Gulf Atlantic	499,366	502,773	3,407	58,786
Louisiana	363,496	375,856	12,360	49,660

Oklahoma	214,093	215,703	1,610	21,900
Alabama	382,873	346,428	(36,445)	33,638
Mississippi	191,976	165,156	(26,820)	16,443
Total	5,461,972	5,765,642	303,670	805,108

Source: FY 2016 data retrieved from EDW.

Supervisory span of control challenges occurred in area facilities due to 292 vacant supervisor positions and supervisors frequently detailed to higher level assignments or to other vacant supervisor positions. Span of control challenges along with the supervisor’s daily workload to oversee delivery and customer service operations also contributed to their ability to effectively manage daily duties and responsibilities at some units.

Unfilled Supervisor Vacancies

Unfilled supervisor vacancies contributed to span of control challenges in post office operations. In FY 2016, there were 2,547 supervisor positions authorized, with 2,255 supervisors in the Southern Area, leaving 292 (11 percent) vacant positions (see [Table 3](#)).

² The data for workhours was obtained on May 2, 2017 for Labor Distribution Code 20, Supervision, Delivery Services Operations.

Table 3. FY 2016 Southern Area Supervisor Vacancies by District

District	Authorized Supervisors	Supervisors On Rolls	Supervisor Vacancies	Percentage of Positions Vacant
Alabama	164	153	11	7%
Arkansas	108	92	16	15%
Dallas	229	197	32	14%
Fort Worth	150	138	12	8%
Gulf Atlantic	248	219	29	12%
Houston	276	241	35	13%
Louisiana	176	155	21	12%
Mississippi	96	85	11	11%
Oklahoma	124	112	12	10%
Rio Grande	280	237	43	15%
South Florida	310	279	31	10%
Suncoast	386	347	39	10%
Total	2,547	2,255	292	11%

Source: Data retrieved from EDW, Authorized vs. On Rolls for Field Executive & Administrative Schedule (EAS) Vacancy Report. Compared the dates of October 1, 2015 and September 30, 2016.

Also, our analysis of 34 selected delivery units showed in FY 2016, there were 70 supervisor positions authorized, with 58 on rolls, leaving 12 (17 percent) vacant positions³, six positions were vacant for over a year (see [Appendix E](#)).

District officials and facility management stated that their challenges to fill vacancies included:

- Postal management had difficulty finding qualified candidates internally and externally with the knowledge, skills and abilities required to perform the supervisory duties and tasks.
- The process used to fill vacancies is time consuming, and can take up to 90 days or longer.
- Postal management had difficulty retaining newly selected supervisors because the position responsibilities were more than those outlined in the vacancy announcement.
- Geographical locations for some vacancies are not desirable to candidates due to the high cost of living or location of the delivery unit.

³ Our analysis was based on the number of supervisor vacancies as of September 30, 2016. The number of vacant positions varied throughout the year.

Supervisors frequently detailed to higher level assignments or to vacant supervisor positions also contributed to span of control challenges.

- Craft employees used as temporary supervisors are not interested in applying for permanent supervisory positions because of the heavy workload, daily challenges with completing time sensitive tasks, salary differences, or they are not interested in managing other craft employees.

Southern Area management stated they had several strategies in place to address supervisor vacancies. In May 2017, area management implemented additional strategies to assist districts that included, assigning every district an area human resource analyst and conducting weekly meetings with all district human resource managers to discuss each vacancy and actions taken by the districts to fill their vacancies. Therefore, we will not make a recommendation on this issue.

Detailed Assignments

Supervisors frequently detailed to higher level assignments or to vacant supervisor positions also contributed to span of control challenges. In FY 2016, 242 supervisors were detailed to higher level assignments or to vacant supervisor positions. This created voids at the detailed supervisor's assigned duty stations and resulted in their workload being unassigned, reassigned and absorbed by postmasters, station managers or other supervisors, which contributed to extra hours of straight time⁴ pay for the supervisors.

Acting supervisors, classified in the clerk or carrier crafts as 204bs,⁵ were also used to backfill voids at the assigned duty stations. However, 204bs are often not familiar with all the requirements for supervising because they only receive on the job training. There is no formal training for this temporary position. Since 204bs are not properly trained, it can take them more time to complete daily duties, therefore, they may not always be able to effectively manage post office operations, resulting in additional workhours and overtime hours. In addition, 204bs cannot perform all the duties assigned to the supervisory position such as timekeeping duties and accident investigations.

Our analysis of 34 facilities showed there were five supervisors in detail assignments and 44 craft employees being used as 204bs for periods ranging from one day to more than one year (see [Appendix F](#)). For example, one facility had two authorized supervisor positions that were vacant over a year and 204bs were used to backfill the positions. Additionally, another facility had a supervisor detailed for over two years and used a 204b to backfill the position. In several cases, station managers and postmasters assisted with the supervisor's workload to avoid supervisors using extra hours.

The Postal Service authorizes the use of temporary detail assignments to meet organizational needs, for example, to backfill vacant manager or supervisor positions, to backfill when extended leave is used, such as military leave or when unexpected absences occur. Additionally, the Southern Area stated they use detail assignments as a part of their area strategy to develop and train staff. However, temporary detail assignments should be made for the shortest practical time limit.⁶

⁴ Special exempt employees are salaried employees who do not receive overtime pay; however, they are eligible for additional straight time pay for hours worked if they received authorization to work in excess of 8.5 hours on a scheduled day or for any hours worked on a nonscheduled day. Handbook F401, *Supervisor's Guide to Scheduling Premium Pay*, page 56, August 2000.

⁵ A 204b is a craft employee working as an acting supervisor in a detailed EAS position.

⁶ Handbook EL 312, *Employment and Placement*, Section 716.12, November 2016.

Supervisory Duties and Responsibilities

Span of control challenges along with the daily workload of supervisors to oversee delivery and customer service operations also contributed to their ability to effectively manage daily duties and responsibilities at some units. Postal Service policy states that span of control should not be so broad so as to exceed the manager's capacity to manage.⁷ Supervisors prioritized critical time-sensitive post office operational requirements such as setting expectations with carriers, which includes approving the Postal Service (PS) Form 3996, Carrier Auxiliary Control, carrier overtime or route assistance, handling customer service concerns, and correcting clock error rings to ensure they were completed timely. However, some of the administrative and other daily tasks were completed at the end of the day, which may have caused the extra hours or they completed these tasks on the next day.

Managers and supervisors stated supervisory duties should be designed for an eight hour workday, however, the workload can require up to ten hours or more. For example, the requirement to perform two hours of street observations daily, addressing customer concerns over the phone or in person, and investigating accidents may add additional time to the workday. Also, the increase in package volume from Amazon Sunday resulted in a normal occurrence of supervisors working extra hours, weekly. The additional duties and tasks resulted in supervisors not always giving proper attention to managing carriers, which could contribute to carriers not meeting the goal of returning to the office by 6:00 P.M. Several supervisors also indicated some tools designed to assist with efficiency often create more work because they are inputting the same data into multiple systems which is time consuming. This also contributed to additional workhours and the use of extra straight time. Additionally, area management stated supervisors' responsibilities include assisting the Southern Area with special assignments. These assignments include, but are not limited to, rural route counts, function four and service reviews. These assignments often require certified examiners that are experienced and familiar with the review processes. The assignments, which are often performed by delivery supervisors, can require more than a regular eight-hour day to complete the reviews.

To verify supervisory duties and the time involved to complete duties, we obtained checklists supervisors used as guides to assist with accomplishing daily tasks. Some checklists included the amount of time it should take to complete each daily task, while others only listed the daily tasks. To determine the amount of time it takes a supervisor to complete all daily tasks, we used one unit's checklist⁸ which listed the minimum and maximum times required to complete daily tasks. We calculated the range of supervisory workhours needed to complete all required tasks to determine the supervisor's daily workhours from this checklist (see [Appendix G](#)). Although the Southern Area has a standardized supervisor checklist (see [Appendix H](#) for an excerpt), we noted that some facilities could not provide a checklist or the checklists some facilities had showed various daily tasks on the list (see [Appendix I](#)). In addition, we observed a supervisor performing duties in a post office for a day. The actual time recorded by the supervisor for that day was ten hours⁹ (see [Appendix J](#)).

On March 18, 2017, the National Association of Postal Supervisors (NAPS) in conjunction with the Postal Service initiated a SWC work study at 34 pilot sites in six districts in the Northeastern Area. The joint work study between NAPS and the Postal Service will include a review a supervisor's daily duties and responsibilities and address facility management and staffing structure. Therefore, we will not make a recommendation on this issue.

⁷ Employee Labor Relations Manual, Structuring Principles, Section 122 (g), September 2016.

⁸ Russellville Post Office, Russellville, AR.

⁹ Actual time recorded was eleven straight time hours minus one hour for lunch.

Other Matters

In other matters, we identified the SWC worksheet used to determine the authorized number of supervisors in post office operations does not give consideration to all of the supervisors' daily administrative responsibilities.

The SWC's primary measurement is the number and type of employees supervised and not the supervisors' duties and responsibilities to manage the workload, various operational activities, and frequent changes in facilities that impact operations.

Specifically district officials and facility management informed the U.S. Postal Service Office of Inspector General (OIG) that:

- The SWC worksheet does not include credits for supervisors for a seventh delivery day for Amazon Sunday operations. Additionally, if a facility is used as an Amazon Hub site, credit is not given.
- The SWC worksheet does not give consideration to the hours of operation for the facilities. Credit is not given for the time the first employee is scheduled to arrive until the last employee is scheduled to leave.
- The SWC worksheet does not give equal credit for rural carriers. Supervisors are now required to manage rural carriers, who were once considered self-managed. Supervisors now take as much time to manage rural carriers as they do to manage city carriers. For instance, the AM supervisors must enter daily information into the Rural Workhour Tracker, such as the rural carriers' lunch and break times, and return times. In addition, the supervisor is responsible for tracking package volume, which has increased tremendously for rural carriers, and scan reports for rural carriers.
- The SWC worksheet calculation ranges used to determine the number of authorized supervisors is very broad. Specifically, unit management stated that when they complete the SWC worksheet the results may be that they are a few points away from getting an additional authorized supervisor. We determined that the calculation ranges are over 30 points (see Table 4).

Table 4. Supervisory Workload Credit Calculations

SWC Ranges	Supervisors Authorized	Points to Next Number of Authorized Supervisors ¹⁰
18.50 - 50.49	1	31.99
50.50 - 85.49	2	34.99
85.50 - 123.49	3	37.99
123.50 - 163.49	4	39.99
163.50 - 203.49	5	39.99
203.50 - 243.49	6	39.99
243.50 - 283.49	7	39.99
283.50 - 323.49	8	39.99

Source: Postal Service, SWC Auto Worksheet instructions.

¹⁰ The OIG performed this calculation to show the points needed to get another authorized supervisor.

Including the supervisor's daily administrative duties and responsibilities outlined above in the SWC worksheet, could result in more accurate calculations of the number of supervisors needed and further improve span of control in post office operations.

The joint work study as noted between NAPS and the Postal Service will include a review addressing facility management and staffing structure. Therefore, we will not make a recommendation on this issue.

Recommendation

We recommend management monitor the use of supervisors to detail assignments to lessen the impact to post office operations.

We recommend the Vice President, Southern Area:

1. Monitor the use of supervisors to detail assignments to ensure they are made for the shortest practical time limit to lessen the impact to post office operations.

Management's Comments

Management disagreed with the methodology and conclusions of the audit. Management stated that our report did not reflect whether the Postal Service Management Structure Study dated July 2003 had been revised to include technology advances and operational changes. Management also questioned the audit objective and its relationship to supervisor vacancies, workhours over plan, and overtime hours.

Regarding the span of control, management stated that [Appendix D](#) does not reflect the 204b clerks used to backfill the supervisor positions. Management stated that if data from [Appendix F](#) is considered, there were five supervisors providing oversight at these three offices. If the 44 temporary supervisors were considered at the sites reviewed, the span of control would be 1:20, well below the 1:26 target.

Management also noted the report listed 292 supervisor vacancies for an authorized complement of 2,547. Filling all vacant positions would still not achieve the targeted span of control.

Finally, management disagreed that the seven examples of locally generated checklists were representative of daily supervisor duties and noted that these checklists failed to address all supervisor duties and responsibilities. Only one of the checklists mentioned supervisor duties associated with a retail unit's financial responsibilities.

Management agreed with our recommendation, stating that they monitor detail assignments by requiring monthly submissions from the district, consolidated into a monitoring tool for the area. The Southern Area provided the tracking template to the OIG on July 28, 2017.

See [Appendix K](#) for management's comments in their entirety.

Evaluation of Management's Comments

The OIG considers management's comments responsive to the recommendation in the report.

Regarding management's statement that our report did not reflect whether the Postal Service Management Structure Study had been revised, we noted in the report that the 2003 study was the most recent data that had relevance to our audit. Technological advances made in operations since 2003 would not have been included in the study. We included this study to demonstrate the span of control of 1:26 was consistent with industry best practice trends.

Regarding management's statement that three offices in [Appendix D](#) were listed with no supervisors included in the calculations, these three locations did not have permanent supervisor positions filled. Our calculations did not include any 204b temporary supervisors because these employees are only used temporarily and are filling a permanent supervisor position.

Regarding management's statement that the objective of the audit was to achieve a questioned target of 1:26, the objective

was to assess the supervisory span of control and use of supervisor workhours, not to establish a span of control target. We cited a Postal Service management study that determined the average span of control of 1:26 was consistent with acceptable best practices.

Regarding management's comments about checklists not being validated, it was never our intent to validate the checklists. During our site visits, we requested the checklist that supervisors use in performing their daily duties — which they provided — and also indicated that the duties were assigned by the postmaster, station manager or, at times, the district assigned duties. We agree the checklists do not address all supervisor duties and responsibilities. The checklist in [Appendix H](#) was from the Southern Area delivery operations website and, in comparison, the three checklists in [Appendix I](#) showed that management developed their checklists based on their units' priorities.

The OIG considers management's comments responsive to the recommendation and corrective actions should resolve the issues identified in the report. Management provided the tracking tool on July 28, 2017, which contains information such as the employee name, title, detail assignment, effective date, end date for the detail assignment, and the reason for the detail. We consider recommendation 1 closed with the issuance of this report.

Appendix A: Additional Information

Background

Supervising post office operations requires supervisors to possess the knowledge, skills and abilities to manage delivery (city and rural), retail, and customer service operations requirements as well as frequent interaction with the public. Supervisor daily duties and responsibilities include, assessing the unit workload, Delivery Operations Information System (DOIS) daily reporting, using Automated Vehicle Utilization System (AVUS) to manage day to day vehicle use, Amazon reporting, setting carrier expectations, assigning vacant routes and pivoting routes, street management, correcting employee clock rings, following up on Enterprise Customer Care (eCC) inquiries and conducting performance discussions with employees.

Span of control is defined as the number of subordinates in an organization who report directly to one supervisor. There is no span of control target for post office operations. The Postal Service uses the SWC worksheet to determine the number of EAS Customer Service Supervisors in a unit. These worksheets are completed on a facility by facility basis, and each facility's span of control is calculated separately. SWCs are workload driven. It identifies and measures the workload of supervisors. The primary measure used is the number and type of employees supervised.

The calculation of employee SWCs includes only those employees on the rolls of the post office or carrier station. Custodial and maintenance employees on the rolls of a plant which are domiciled in a post office or carrier station are not included in the SWC calculation. Administrative employees on the rolls of the district office domiciled in a post office or carrier station are not to be included in the SWC calculation. Lastly, vacant positions that are authorized to be filled should also be included in the SWC calculation, if they are not covered by City Carrier Assistants, Transitional Employees, Postal Support Employees and Casuals. SWC calculations are performed on a SWC Auto Worksheet.

Objectives, Scope, and Methodology

Our objective was to assess the span of control and use of supervisor workhours in post office operations in the Southern Area. To accomplish our objective, we:

- Reviewed applicable policies and procedures related to unit span of control to improve operational efficiency.
- Reviewed applicable policies related to employee overtime rules.
- Obtained and analyzed FY 2016 workhour and overtime, overtime costs for EAS-17 Customer Service Supervisors and employee complement from EDW Accounting Data Mart (ADM).¹¹
- Analyzed similar size units' span of control, supervisory vacancies, and supervisory workhours and overtime hours to determine if there is a correlation between supervisory vacancies and excessive workhours and supervisory overtime.
- Selected and reviewed 34 facilities in the Southern Area, which were tiered high, medium and low based on the variance in supervisory workhours. We included units that had both city and rural routes and units that had only city or rural routes.¹²
- Interviewed Postal Service area and district officials, post office and station managers, postmasters, and supervisors to discuss span of control, supervisor workhours, supervisor overtime, and vacancies.

¹¹ We included Customer Service Supervisors from Labor Distribution Codes 20 and 40.

¹² We only included post offices, stations, and branches with at least one authorized supervisor in our review.

We conducted this performance audit from February through September 2017 in accordance with generally accepted government auditing standards and included such tests of internal controls as we considered necessary under the circumstances. Those standards require that we plan and perform the audit to obtain sufficient, appropriate evidence to provide a reasonable basis for our findings and conclusions based on our audit objective. We believe that the evidence obtained provides a reasonable basis for our findings and conclusions based on our audit objective. We discussed our observations and conclusions with management on July 27, 2017, and included their comments where appropriate.

We assessed the reliability of data by confirming the data with management. We determined that the data were sufficiently reliable for the purposes of this report.

Prior Audit Coverage

We did not identify any prior audits or reviews related to the objective of this audit within the last 3 years.

Appendix K: Management's Comments

SHAUN E. MOSSMAN
VICE PRESIDENT, AREA OPERATIONS
SOUTHERN AREA

August 21, 2017

LORI LAU DILLARD
DIRECTOR, AUDIT OPERATIONS

SUBJECT: Draft Audit Report – Supervisory Span of Control – Southern Area
Report Number DR-AR-17-DRAFT

Thank you for the opportunity to respond to the OIG's findings from the review of Supervisory Span of Control for the Southern Area (SA). The Southern Area agrees that it is important to monitor the use of supervisors on detail assignments to lessen the impact to post office operations.

The Southern Area disagrees with the methodology and conclusions of the audit. On page one of the audit, the term "span of control" was defined as "the number of employees that report to each supervisor". The audit also cited Postal Service Management Structure Study dated July 2003 which "determined the average span of control of 1:26 for postmasters was consistent with accepted best practice trends" (page one after cover). The referenced report did not reflect if the fourteen year old study had been revised to include technology advances and operational changes.

The objective of the audit is unclear. The audit title is "Supervisory Span of Control", but a substantial portion of the report cited supervisor vacancies, workhours over plan, and overtime hours. This caused confusion on whether the objective of the audit was to reduce the ratio of employees per supervisor, fill vacancies, or reduce workhours and overtime. Each point of confusion is addressed below. There was not a monetary impact cited in the report and not addressed in the response.

Span of Control

The report states that in (FY) 2016 the Southern Area had an "average span of 1:31 (one supervisor per 31 employees)". The report lists the span of control for the reviewed sites as 1:35 (page 15). A cursory review of **Appendix D: Span of Control at 34 Selected Delivery Units** (page 15) shows that three offices were listed with no supervisors included in the calculations. It is not reasonable to state that there were no supervisors at these three Delivery Units. As indicated in the report, "204bs were used to backfill the positions" (page 6) and the span of control ratios listed above clearly did not include 204bs in the calculation. If data from **Appendix F: Number of Temporary Supervisors at 34 Selected Delivery Units** (page 17) is considered, there were five supervisors providing oversight at these three aforementioned offices. If the 44 temporary supervisors (page 17) were added to the 60 at the reviewed sites, the span of control would be 1:20, well below the 1:26 target.

Supervisor Vacancies

The report lists 292 Southern Area supervisor vacancies for an authorized compliment of 2,547. If the objective of the **Supervisory Span of Control** report is to achieve a questioned target of 1:26, data cited in the report reveals that filling all vacant positions would result in a span of control of 1:27. Target would still not be achieved.

PO Box 224748
DALLAS, TX 75222-4748
214-819-8650
FAX: 214-905-9227

Workhours Over Plan and Overtime Hours

The report indicated that the "span of control challenges" were responsible when "supervisory workhours exceeded the area's FY 2016 plan by 303,670 hours and also contributed to the use of 805,108 hours of overtime by supervisors" (page 3, and Table 2, page 4). The report appears to be incomplete as seven examples of locally generated check lists were presented as representative of daily supervisor duties. There was no evidence that the accuracy of these checklists had been validated. These checklists failed to address all supervisor duties and responsibilities. For example: only one of the seven checklists (page 24) mentioned supervisor duties associated with a retail unit's financial responsibilities. That example was a supervisor issuing stamp stock at 5:49 PM. The report failed to mention the work hours and/or overtime required to complete inter-unit and intra-unit acceptance and transfer of stamp stock, counts of accountable credits, and customer and lobby assistance at the retail window section.

Recommendation 1:

1. Monitor the use of supervisors to detail assignments to ensure they are made for the shortest practical time limit to lessen the impact to post office operations.

Management Response/Action Plan:

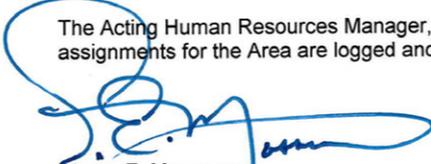

Southern Area Human Resources (HR) monitors detail assignments by requiring monthly submissions from the Districts. The data is consolidated into a monitoring tool for the Area. The Southern Area provided the tracking sheet template to the OIG on July 28, 2017.

Target Implementation Date:

N/A

Responsible Official:

The Acting Human Resources Manager, Charisse Newberry, will be responsible for ensuring detail assignments for the Area are logged and monitored.

Shaun E. Mossman
